# Going deeper with text

### What is text?

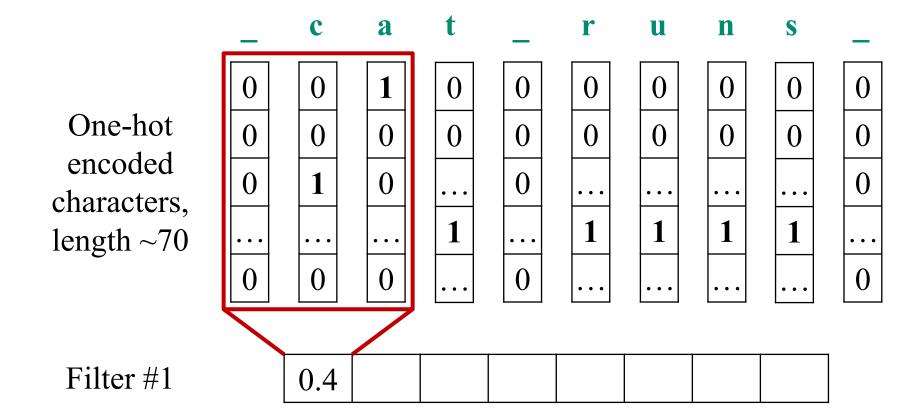

#### You can think of text as a sequence of

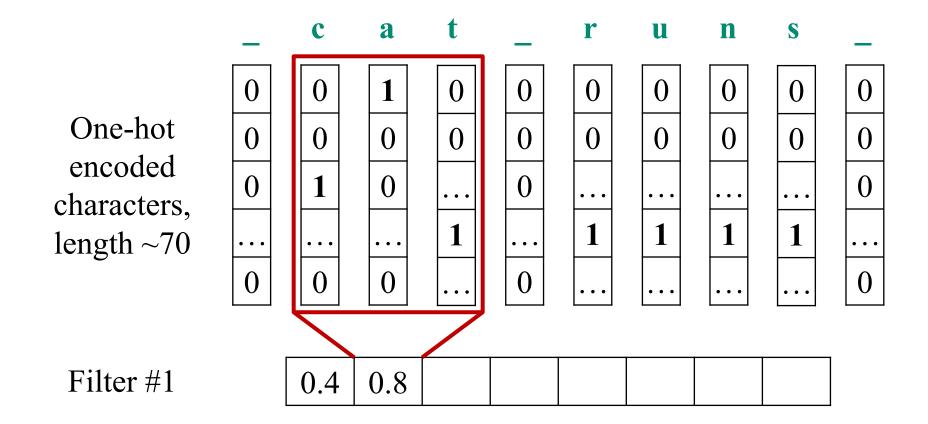

- Characters
- Words
- Phrases and named entities
- Sentences
- Paragraphs
- •

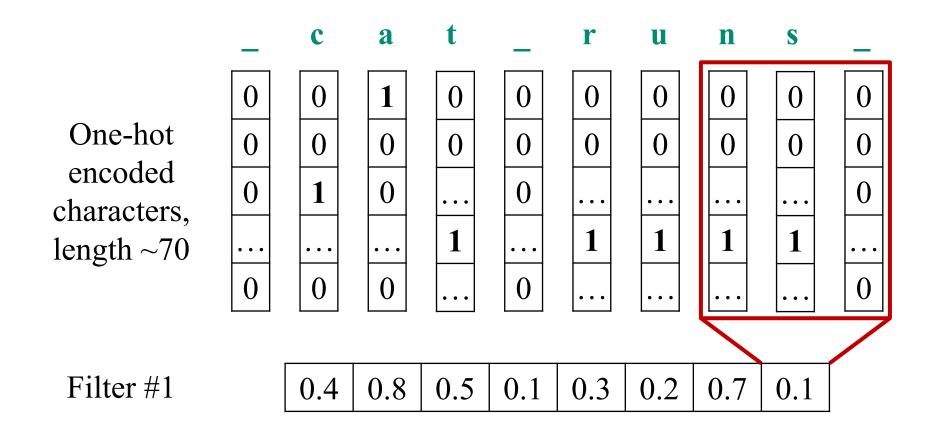

### Text as a sequence of characters

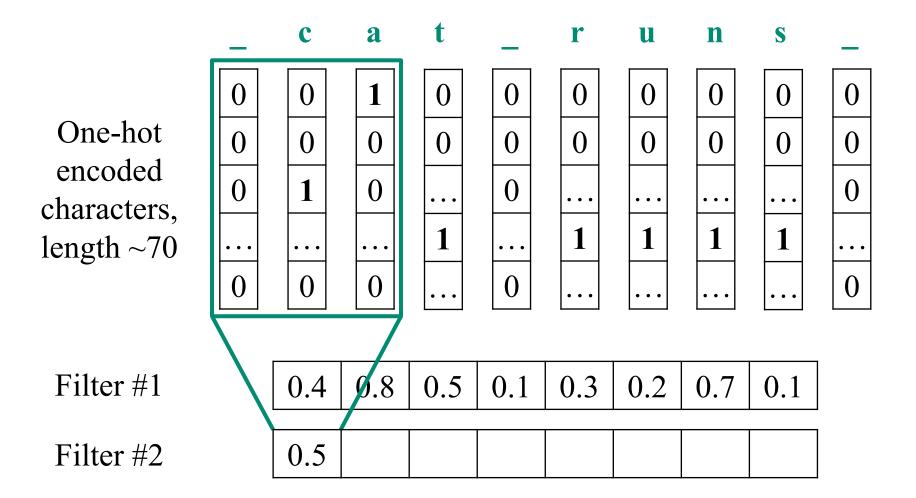

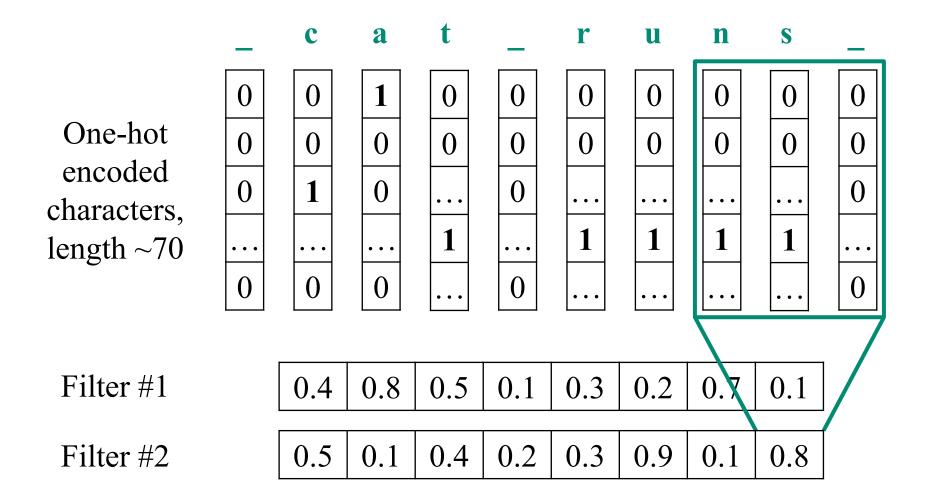

Let's start with character *n*-grams!

0.4	0.7	0.3	0.7	0.5	0.5	0.9	0.4
		0.8	0.5	0.3	0.7		

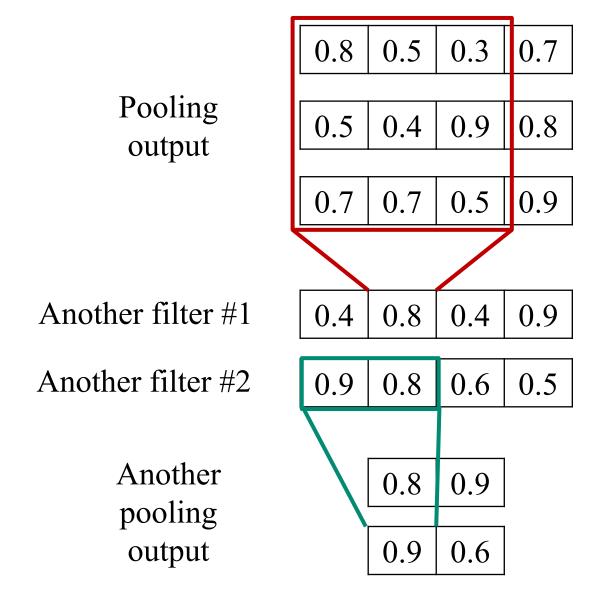

Provides a little bit of position invariance for character n-grams

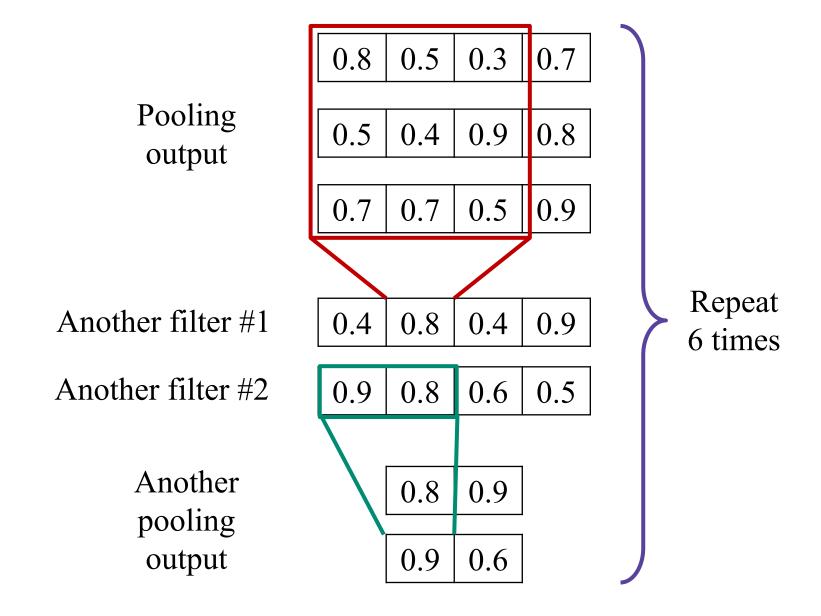

# Repeat 1D convolution + pooling

# Repeat 1D convolution + pooling

# Repeat 1D convolution + pooling

### Final architecture

- Let's take only first 1014 characters of text
- Apply 1D convolution + max pooling 6 times
  - Kernels widths: 7, 7, 3, 3, 3, 3
  - Filters at each step: 1024
- After that we have a  $1024 \times 34$  matrix of features
- Apply MLP for your task

### **Experimental datasets**

### Categorization or sentiment analysis

$\sim$			
	ma		O IV
$oldsymbol{ a}$	ma	uu	

### **Bigger**

Dataset	Classes	Train Samples
AG's News	4	120,000
Sogou News	5	450,000
DBPedia	14	560,000
Yelp Review Polarity	2	560,000
Yelp Review Full	5	650,000
Yahoo! Answers	10	1,400,000
Amazon Review Full	5	3,000,000
Amazon Review Polarity	2	3,600,000

### **Experimental results**

#### Errors on test set for classical models:

Model	AG	Sogou	DBP.	Yelp P.	Yelp F.	Yah. A.	Amz. F.	Amz. P.
BoW	11.19	7.15	3.39	7.76	42.01	31.11	45.36	9.60
<b>BoW TFIDF</b>	10.36	6.55	2.63	6.34	40.14	28.96	44.74	9.00
ngrams	7.96	2.92	1.37	4.36	43.74	31.53	45.73	7.98
ngrams TFIDF	<b>7.64</b>	<b>2.81</b>	1.31	4.56	45.20	31.49	47.56	8.46

#### Errors on test set for deep models:

LSTM	13.94	4.82	1.45	5.26	41.83	29.16	40.57	6.10
Sm. Full Conv.	11.59	8.95	1.89	5.67	38.82	30.01	40.88	5.78
Lg. Full Conv. Th.	9.51	-	1.55	4.88	38.04	29.58	40.54	5.51
Sm. Full Conv. Th.	10.89	-	1.69	5.42	<b>37.95</b>	29.90	40.53	5.66
Lg. Conv.	12.82	4.88	1.73	5.89	39.62	29.55	41.31	5.51
Sm. Conv.	15.65	8.65	1.98	6.53	40.84	29.84	40.53	5.50
Lg. Conv. Th.	13.39	-	1.60	5.82	39.30	<b>28.80</b>	40.45	4.93
Sm. Conv. Th.	14.80	-	1.85	6.49	40.16	29.84	40.43	5.67

Deep models work better for large datasets!

### Summary

- You can use convolutional networks on top of characters (called learning from scratch)
- It works best for large datasets where it beats classical approaches (like BOW)
- Sometimes it even beats LSTM that works on word level
